

## ***TTEC Style 1050 Measuring Junction & Weld Pad Design***

- TTEC's Style 1050 Measuring Junction is located under the "V-shaped" pad at the tip.
- This design maximizes speed of response as the measuring junction is in direct contact with the Boiler Tube Skin Surface.
- Grounded Measuring Junction is standard (Ungrounded also available)
- "V-shaped" pad acts as a Radiation Shield to prevent errors from background Radiant Heat in the Boiler area
